Python Stack

Python 3.10+ · FastAPI · Flask · PostgreSQL · REST APIs · Docker

Systems & Automation

- OS-level automation & scripting
- subprocess & shell control
- ADB device automation
- Network tooling
- MicroPython (ESP32/ESP8266)

Languages

- **English** — Fluent (C1)
- **French** — Native / C2
- **Spanish** — Basic (A2)
- **Polish** — Fluent

Professional Summary

Junior Python Backend Developer with hands-on experience building REST APIs using FastAPI and Flask, automation tools using Python, and embedded Python projects with MicroPython.

Background in **commercial .NET backend development** brings a strong engineering mindset, clean architecture principles, and production awareness into Python projects.

Python Engineering Experience

- Designed and implemented REST APIs using FastAPI and Flask frameworks
- Built automation tools using subprocess, shell commands, and device control (ADB)
- Implemented rule-based engines and structured JSON processing pipelines
- Developed embedded Python solutions using MicroPython for ESP32/ESP8266 devices
- Applied backend architecture principles learned from production .NET systems

Education & Qualifications

B.Eng. Computer Engineering & Mechatronics

University of Economy in Bydgoszcz | Degree Conferred: October 2025

Final Grade: Very Good (4.26/5.0) · **Professional Title:** Inżynier (Engineer)

Technical Foundation: Algorithms & Data Structures, Object-Oriented Programming, Database Systems, Software Engineering, System Architecture, Embedded Systems, Networking Fundamentals

Python Portfolio Projects

FaceAPI – Facial Recognition Microservice

GitHub Repository

FastAPI · JWT Authentication · Modular Architecture

- Cleanly structured FastAPI backend with authentication
- Modular separation of routes, services, and models
- Clear roadmap toward PostgreSQL, async processing, and Docker

SpanishTeacher – Rule-Based Language Engine

Python · Flask · Algorithmic Logic · JSON Data Processing

- Rule-based language processing engine for Spanish verb conjugation
- Non-trivial algorithmic logic and structured data handling
- Demonstrates backend reasoning beyond basic CRUD operations

Automation & Systems Tooling

Python · Subprocess · OS Automation · Networking · Embedded Systems

- **adbChromecast:** Device automation via ADB and subprocess management
- **SerpentEye:** Network reconnaissance and security scanning tool
- **FacialRec:** Computer vision experiments with OpenCV
- **MicroPython ESP Projects:** IoT device development with MQTT, UART, and sensors

Position & Preferences

- **Position:** Junior Python Backend Developer / Automation Engineer
- **Level:** Junior Python Developer with strong foundational skills
- **Focus Areas:** API development, automation, backend systems, embedded Python
- **Start Date:** Available immediately
- **Location:** Open to relocation or remote opportunities
- **Work Model:** Flexible - remote, hybrid, or onsite
- **Contract:** Open to B2B or employment contract

Consent Clause

I consent to the processing of my personal data for recruitment purposes.

I confirm that all information provided is accurate and complete.
